

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents our state with an incredible opportunity to bring well-paying jobs to rural Idaho, boost our state's economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

I am impressed with Perpetua Resources' current dedication to repairing legacy environmental issues at the site from mining activity that took place on and off for more than 100 years. This is a major investment. Government agencies would not have the budget to perform all the necessarily reclamation work. This private/public partnership is the right approach for Idaho and will solve environmental issues while providing the area with a significant economic boost. In reviewing the SDEIS, I am very impressed with the further improvements the company has made to its plan. They eliminated the Fiddle Development Rock Storage Facility, reduced the project footprint again, added more plantings on site to reduce water temperature and outlined additional actions to be taken to improve water quality. It is clear to me we have a path forward that will protect Idaho's environment and allow us to mine a critical mineral our nation is currently lacking.

As the U.S. Forest Service and other state and federal agencies review the 2021 Modified Mine Plan and determine the course of action, I encourage you to consider the positive benefits Perpetua Resources will have on Idaho, especially now that the company has reduced its environmental footprint and made further improvements to water quality. This truly is a win-win opportunity for Idahoans and the environment. After years of careful scrutiny by regulators and the community, it is time for us to make these benefits a reality.
