

I have been closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents an opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am grateful for the opportunity to comment on their SDEIS.

Perpetua Resources has studied Stibnite for the past 12 years. The company has identified a safe way to mine the site, while minimizing environmental impacts in the Burntlog Route and providing our nation with a source of the critical mineral antimony. Today, there is no mined antimony in the United States and that concerns me. Antimony is crucial to our national security. It is found in every military bullet, uniform and flare. Simply put, we need antimony to keep our troops and country safe. The Stibnite Gold Project would meet 35% of America's antimony demand. This is clearly a project we need to move forward.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
