

I support the progress made on Perpetua Resources' Stibnite Gold Project. As an Idaho native, I believe the project has the ability to both add to the local economy, while simultaneously cleaning up legacy tailings and waste, making the environment better for wildlife and the community. I have reviewed the planned Burntlog Route and believe it is the best way forward to minimize impacts to the environment and see the environmental benefits of this project come to fruition.

I further look forward to seeing Stibnite Gold contribute to our nation's energy and defense capabilities by providing a domestic source of the strategic and critical metal antimony.

I am fully supportive of the progress made to date in the permitting process and await the responsible development of the project under Perpetua Resources' continued stewardship.
