

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of Perpetua Resources' Supplemental Draft Environmental Impact Statement. Public participation is a huge part of the permitting process and I appreciate the opportunity to share my thoughts, especially because the Stibnite Gold Project will leave conditions at the site better than they are today.

As it stands today, the Stibnite Gold Project site is a brownfield site. The U.S. government tried to restore the area years ago but the work that was done didn't go far enough. The old tailings piles left by previous mining companies are still unconstrained and therefore present a risk of leaching minerals into nearby streams and the groundwater. Under Perpetua's the 2021 Modified Mine Plan, the company will pick up and reprocess these legacy tailings, which will reduce long-term metal loading in the ground and surface water. This would be a huge win for the site because today arsenic and antimony levels far exceed human health standards at multiple points across the site. Perpetua's water treatment during operations will further lower levels of these metals in the river and cause concentrations to be below the current baseline conditions. What is more impressive to me is the improvements Perpetua made to its plan following the DEIS. Now, the company will no longer need long-term water treatment at site following mining. The project size has been reduced by 13% when compared with the original design. And changes have been made at site to make sure water temperature stays at or below the current temperatures on site. The site needs to be remediated and Perpetua has a plan to do it the right way.

I urge you to approve Perpetua Resources' project. The Stibnite Gold Project will provide a huge benefit to our community and the local environment and the company has taken the time to reduce its footprint and improve water quality at site. The permitting process is designed to move the best plans forward and I feel that is what we will do with the 2021 Modified Mine Plan.
