

Thank you for the opportunity to comment during the Supplemental Draft Environmental Impact Statement period for the Stibnite Gold Project. This project could help stop our import reliance on China and Russia for antimony and improve environmental conditions at an abandoned mine site. It is important to me to see this project move forward.

Last summer, Perpetua agreed to provide antimony to largescale battery maker Ambri. The agreement establishes a foundation to help facilitate the decarbonization of energy grids in the U.S. as well as around the globe. Ambri's batteries could fundamentally change how our energy system operates by making it possible for power grids to rely on more power from the wind and sun. The Stibnite Gold Project is key to making this happen because it would be America's only mined source of antimony. Without it, we will continue to have to rely on China and Russia for this critical mineral. I want to support America's clean energy transition and supporting the Stibnite Gold Project using Burntlog Road is one of the best ways I can do that.

For the above reasons and many more, please move forward with the 2021 Modified Mine Plan for the Stibnite Gold Project as it is important to all Idahoans. After more than 12 years of scientific analysis by the company and six years of regulatory review that the project, we should not have to wait much longer to recognize the project's benefits.

Eric Glatz
