

It is with great pleasure that I write to the U.S. Forest Service to encourage you to permit the proposed activities outlined by Perpetua Resources during this public input process. This project could help restore Stibnite, secure an American source of antimony and strengthen our nation's supply chains.

Perpetua Resources has made it clear reclamation efforts will start alongside operations. For example, before mining ever begins, fish will be reconnected to their native spawning groups upstream through a fish passageway. Perpetua Resources also identified more ways to help fish populations. Originally, the company proposed not replacing the pit lake at the Yellow Pine Pit, however, a pit lake is included in the 2021 Modified Mine Plan to make sure currently used habitat is replaced and available for the fish that use it today. The company is also adding more plantings along waterways to reduce water temperatures for fish. Perpetua also has proposed using Burnt Log Road in order to keep vehicles away from precious waterways. I am impressed by the improvements the company made to its plan based on public feedback.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.

Theodore Richichi
