

I am writing to express my views on Perpetua Resources' Stibnite Gold Project. The opportunity presented by the project is compelling for many reasons and I am committed to seeing come to fruition. This is the best opportunity to clean up legacy tailings and waste, reconnect fish to miles of spawning grounds that they have been blocked from for 80 years and restore a river. Without Perpetua Resources, the site will likely never get the environmental attention it deserves.

The permitting process is designed to move the best plans forward. After reviewing the SDEIS, it is clear to me the Burntlog Road option is the very best plan for Idaho. This will allow the abandoned mine site to be restored, America to secure a domestic source of the critical mineral antimony and fish to be reconnected to their native spawning grounds. The Stibnite Gold Project has been under federal review for the past six years and Perpetua Resources has been studying the site for an additional six years. Twelve years of scientific analysis and stakeholder input is ample time to evaluate a project. The process has been rigorous and done its job. Now, we need to move the Stibnite Gold Project forward.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
