Ms. Jackson,

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of Perpetua Resources' Supplemental Draft Environmental Impact Statement. As a local Cascade community member and employee of OK Gravel, I have observed Perpetua's participation in our community and appreciate the continuous updates they provide for me and my neighbors. They are transparent and open to discuss the project with anyone who has questions, that is commendable for a mining company.

The 2021 Modified Mine Plan is in line with Idaho values and our way of life. Idahoans have long understood that using the land and protecting the land can go hand-in-hand. Perpetua Resources' project blends improving public lands with building a robust business and it is an approach I encourage. From repairing a legacy mine site to developing roads and power infrastructure, the \$1 billion investment the company would make in Idaho will benefit the entire state. For example, ground and surface water quality are currently a concern around the site. In some places on the site, arsenic and antimony levels in the water are currently 700 times higher than drinking water standards. After reading comments submitted following the DEIS, the company identified even more ways to improve water quality and reduce water temperature. If we let Perpetua Resources remove legacy tailings it will provide long-term reduction in metal loading in ground and surface water. These are benefits we cannot pass up.

Thank you for the thorough review of the Stibnite Gold Project. After analyzing the project for the past six years, I urge you to now move forward and permit the mine using the 2021 Modified Mine Plan via Burnt Log Road so Perpetua Resources can put Americans back to work.

Best,

Tom Olson
