

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the NEPA Comment Period. I have been closely following Perpetua Resources' plans since they first came into our state, in large part because some of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities. The Stibnite Gold Project could help us restore an abandoned mine site.

Given the history of the region, I was a bit skeptical when I first heard about this project, but it is clear that Perpetua is going out of their way to put environmental safety and restoration front and center. Especially with the improvements the company made in its 2021 Modified Mine Plan. For example, in the SDEIS the company eliminated the Fiddle Rock Development Storage facility, which resulted in a 168-acre reduction in the project footprint. They also made improvements to water quality, so no long-term water treatment will be necessary after mining is complete. After looking at the tools provided by the USFS, I feel strongly that the Modified Mine Plan is the best option moving forward. It addresses the purpose and need of the agencies in a manner that provides environmental advantage and economic feasibility over the other analyzed alternatives. With so much promise for the site's future, I hope the consideration of no action is removed from the table. There is finally an opportunity to restore the site and help secure America's source of antimony, a designated critical mineral.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward. The permitting process is designed to advance the best plans possible. I believe the work of regulators over the past six years is proof this is what is happening with the Stibnite Gold Project. The thorough review process has been beneficial but there should be no more delays. The project should move forward in a timely manner.

Richard Sammis
