

Perpetua Resources' Stibnite Gold Project presents Idaho, particularly rural Idaho, with a huge economic and environmental opportunity. The company has a plan to improve water quality, wetlands and the river and leave the site better than it is today. I am writing to encourage you to permit the project as quickly as possible.

The Stibnite project is important to me because it will strengthen our national security through the production of antimony. Right now, the U.S. relies on foreign countries for this mineral. These days, I think Americans value a domestic supply chain for such important minerals more than ever. The project at Stibnite could produce over 100 million pounds of antimony and become our only domestically mined source in the entire country. Antimony is used to make electronics and batteries and is also a critical mineral for national defense and the energy industry. With the uncertainties that the Coronavirus brought to our world and current war in Ukraine, I want our country to do everything it can to protect us from the uncertainty of changing markets and trade wars. I also feel confident in the company's 2021 Modified Mine Plan. In the SDEIS, the company has managed to eliminate the need for long-term water treatment, improve water quality and shrink the size of the project footprint by 13 percent.

As the U.S. Forest Service and other state and federal agencies review the 2021 Modified Mine Plan and determine the course of action, I encourage you to consider the positive benefits Perpetua Resources will have on Idaho, especially now that the company has reduced its environmental footprint and made further improvements to water quality. This truly is a win-win opportunity for Idahoans and the environment. After years of careful scrutiny by regulators and the community, it is time for us to make these benefits a reality.
