

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents our state with an incredible opportunity to bring well-paying jobs to rural Idaho, boost our state's economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

The Stibnite Gold Project presents a plan to repair the environment and boost Idaho's economy, especially when using the 2021 Modified Mine Plan. Historic mining operations, development of former town site and natural processes have resulted in significant degradation of many elements of the environment. Loss of fish passage, potential water degradation from previous mining activity and excessive erosion are all of great concern to Idahoans. Right now, fish haven't swam past an abandoned mine pit for more than 80 years. Perpetua will reconnect fish passage before mining ever begins. The company will also improve water quality and temperature to further help fish. More improvements were made to these areas after the DEIS was released. Now, Perpetua Resources has identified ways to keep water temperature at or below baseline conditions. The Stibnite Gold Project would finance reclamation efforts to address these problems, boost Idaho's economy and help secure a critical mineral America needs. It is a win-win for everyone.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six year. That is enough. Now, it is time to let Perpetua get to work.
