

Thank you for the opportunity to comment on the SDEIS for the Stibnite Gold Project. This project is important for Idaho's future and our nation's future. Perpetua Resources has a plan to leave the site better than they found it and produce antimony, a mineral we need for our national defense and clean energy future.

One of the top reasons why I support Perpetua Resources' plans is because it will secure an American source of antimony. The federal government deemed antimony a critical mineral because of its use in the energy and national defense industries. Today, there is no domestic source of this mineral. Most of it comes from China or Russia, which makes our country vulnerable. America's military depend on antimony to protect our country and stay safe. The mineral is used in munitions, military clothing, night vision goggles, infrared sensors and more. It is irresponsible to continue relying on our adversaries to provide us with antimony. I have reviewed the plan and believe the Burntlog option will allow the company to mine safely, minimize the impacts to the environment and help protect our national security.

Please move the Stibnite Gold Project forward, especially now that the public has had multiple opportunities to provide feedback and regulators have been analyzing Perpetua Resources' plans for six years. The review process has improved the project and now it is time to make it a reality.
