

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the NEPA Comment Period. I have been closely following Perpetua Resources' plans since they first came into our state, in large part because some of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities. The Stibnite Gold Project could help us restore an abandoned mine site.

The Stibnite Gold Project would secure America's only source of antimony. Today, we predominately rely on China and Russia for this critical mineral, which is concerning given its importance. Antimony is used heavily in national defense applications, including everything from munitions to military uniforms. It is also key to the clean energy transition. In fact, Perpetua Resources plans to supply antimony to large-scale battery maker Ambri, so they can commercialize their technology. The antimony from Stibnite could help power approximately 1 million homes with solar power for the battery's 20+ lifespan. I support the Stibnite Gold Project using the Burntlog route because I want to help America reach our clean energy goals and remain a safe country.

For the above reasons and many more, please move forward with the 2021 Modified Mine Plan for the Stibnite Gold Project as it is important to all Idahoans. After more than 12 years of scientific analysis by the company and six years of regulatory review that the project, we should not have to wait much longer to recognize the project's benefits.
