

I have been closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents an opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am grateful for the opportunity to comment on their SDEIS.

I understand that in order for Perpetua Resources' Stibnite Gold project to move forward, the company must meet strict state and federal regulations. This gives me faith in the project and process. In addition to a positive record of decision through the NEPA process, Perpetua Resources will still need to obtain up to 50 other permits, approvals and conditions ranging from the Clean Water Act to providing financial assurances for restoration. The Forest Service cannot approve the project without ascertaining that all of these approvals are issued and conditions met. I support Perpetua Resources' plans to restore the site, bring hundreds of jobs to rural Idaho and mine gold and antimony as outlined under the 2021 Modified Mine Plan. I am appreciative of the additional work the company has done to limit its project footprint, improve water temperatures on the site and eliminate long-term water treatment.

The permitting process is working. The plan for the Stibnite Gold Project is improved. Now, it is time to move this project forward to a final record of decision.
