

I am writing to share my thoughts on Perpetua Resources' Stibnite Gold project. There are many reasons why I am excited for Perpetua's project to come to life. It would provide America with our only mined supply of antimony, a mineral critical to our national defense and energy sectors. I hope through my comments you will understand why I want to see this project move forward.

The Stibnite Gold Project presents a plan to repair the environment and boost Idaho's economy, especially when using the 2021 Modified Mine Plan. Historic mining operations, development of former town site and natural processes have resulted in significant degradation of many elements of the environment. Loss of fish passage, potential water degradation from previous mining activity and excessive erosion are all of great concern to Idahoans. Right now, fish haven't swam past an abandoned mine pit for more than 80 years. Perpetua will reconnect fish passage before mining ever begins. The company will also improve water quality and temperature to further help fish. More improvements were made to these areas after the DEIS was released. Now, Perpetua Resources has identified ways to keep water temperature at or below baseline conditions. The Stibnite Gold Project would finance reclamation efforts to address these problems, boost Idaho's economy and help secure a critical mineral America needs. It is a win-win for everyone.

I appreciate your time and thoughtfulness in the review process. The U.S. Forest Service has not cut any corners over the past 6 years analyzing the project and I've appreciated the opportunities to provide feedback. For the reasons I stated in my letter above, please permit the Stibnite Gold Project.

Carl Kolpin
