

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. Today, fish cannot swim past the Yellow Pine pit and heavy metals are leaching into the ground and surface water. The Stibnite Gold Project can leave the conditions better than they are today.

I understand that in order for Perpetua Resources' Stibnite Gold project to move forward, the company must meet strict state and federal regulations. This gives me faith in the project and process. In addition to a positive record of decision through the NEPA process, Perpetua Resources will still need to obtain up to 50 other permits, approvals and conditions ranging from the Clean Water Act to providing financial assurances for restoration. The Forest Service cannot approve the project without ascertaining that all of these approvals are issued and conditions met. I support Perpetua Resources' plans to restore the site, bring hundreds of jobs to rural Idaho and mine gold and antimony as outlined under the 2021 Modified Mine Plan. I am appreciative of the additional work the company has done to limit its project footprint, improve water temperatures on the site and eliminate long-term water treatment.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
