

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the NEPA Comment Period. I have been closely following Perpetua Resources' plans since they first came into our state, in large part because some of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities. The Stibnite Gold Project could help us restore an abandoned mine site.

Perpetua Resources has studied Stibnite for the past 12 years. The company has identified a safe way to mine the site, while minimizing environmental impacts in the Burntlog Route and providing our nation with a source of the critical mineral antimony. Today, there is no mined antimony in the United States and that concerns me. Antimony is crucial to our national security. It is found in every military bullet, uniform and flare. Simply put, we need antimony to keep our troops and country safe. The Stibnite Gold Project would meet 35% of America's antimony demand. This is clearly a project we need to move forward.

The Stibnite Gold Project has been under federal review for the last six years. That has given regulators and the public plenty of time to review the company's plan. I know this project will transform an area in need of environmental repair and secure a domestic supply of antimony. It is for all of these reasons that I encourage you to move the Stibnite Gold Project forward.

James Hatfield
