

America desperately needs antimony. This mineral is used in munitions, large-capacity storage batteries, fire retardants and more. Currently, we are entirely dependent on foreign countries to provide this mineral, which is why I am writing in support of the Stibnite Gold Project. This project can stop our import reliance on antimony.

After reviewing the SDEIS, the 2021 Modified Mine Plan appears to be the alternative that best minimizes adverse environmental impacts as required in the Forest Service's regulations. The company has very comprehensive mitigation measures to protect the natural habitat, wildlife and fish. As a private citizen, I appreciate that in addition to the lengthy NEPA review provided by the U.S. Forest Service the Stibnite Gold Project will also be required to comply with all applicable federal and state laws and regulations, including those governing financial assurance. This knowledge makes me feel comfortable supporting the 2021 Modified Mine Plan and encouraging you to move it forward. Perpetua Resources has proven they are listening to community feedback. The company has gone back to reduce the footprint, improve water quality, so there is no need for long-term treatment, and ensure water temperatures stay at or below current conditions.

As the U.S. Forest Service and other state and federal agencies review the 2021 Modified Mine Plan and determine the course of action, I encourage you to consider the positive benefits Perpetua Resources will have on Idaho, especially now that the company has reduced its environmental footprint and made further improvements to water quality. This truly is a win-win opportunity for Idahoans and the environment. After years of careful scrutiny by regulators and the community, it is time for us to make these benefits a reality.
