

Thank you for the opportunity to comment during the Supplemental Draft Environmental Impact Statement period for the Stibnite Gold Project. This project could help stop our import reliance on China and Russia for antimony and improve environmental conditions at an abandoned mine site. It is important to me to see this project move forward.

Restoring the Stibnite Gold Project site will be an incredible investment. Work clearly needs to be done in the area but it should not be funded through taxpayer dollars. Fortunately, Perpetua Resources wants to make the investment. The company is proposing a mining project and full-scale restoration project. They have plans to reconnect fish with their natural spawning grounds. Perpetua will also improve water quality and temperature. After the comments from the DEIS were analyzed, the company recognized it could do more in those areas. They added wider and taller riparian vegetation plantings around stream channels, as well as including a widened and deepened portion of the East Fork of the South Fork Salmon River Channel in the Yellow Pine pit backfill. The company will also solve sedimentation issues by repairing Blowout Creek.

Please move the Stibnite Gold Project forward, especially now that the public has had multiple opportunities to provide feedback and regulators have been analyzing Perpetua Resources' plans for six years. The review process has improved the project and now it is time to make it a reality.
