

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents our state with an incredible opportunity to bring well-paying jobs to rural Idaho, boost our state's economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

Perpetua Resources has a clear plan to clean up legacy issues in the historic Stibnite Mining District. The company has recently made improvements to their plans that reduce the project footprint, improve water quality and keep water temperatures at or below current conditions. This will improve fish habitat, water quality and safely store old mine waste. Along with restoring the site, the Stibnite Gold Project will produce the only domestically mined supply of antimony. Currently, China is the top producer of this mineral. If the Stibnite Gold Project moves forward, the United States can become less reliant on other countries. Creating a domestic source of antimony will also be beneficial for America's green future. Sourcing antimony within the U.S. will result in lower carbon emissions as we will not need to transport the mineral from China into the U.S. Mining standards in the U.S. are also more protective of the environment.

After reading my letter, I hope you can see why you should permit the Stibnite Gold Project. This project is a good thing for Idaho, helps decrease America's dependence on foreign countries for a critical mineral and cleans up the environment. The company also continued to refine its plan in response to the permitting process, so it has the smallest footprint possible and results in improved water quality conditions on site.
