

I am writing to share my thoughts on Perpetua Resources' Stibnite Gold project. There are many reasons why I am excited for Perpetua's project to come to life. It would provide America with our only mined supply of antimony, a mineral critical to our national defense and energy sectors. I hope through my comments you will understand why I want to see this project move forward.

Given the history of the region, I was a bit skeptical when I first heard about this project, but it is clear that Perpetua is going out of their way to put environmental safety and restoration front and center. Especially with the improvements the company made in its 2021 Modified Mine Plan. For example, in the SDEIS the company eliminated the Fiddle Rock Development Storage facility, which resulted in a 168-acre reduction in the project footprint. They also made improvements to water quality, so no long-term water treatment will be necessary after mining is complete. After looking at the tools provided by the USFS, I feel strongly that the Modified Mine Plan is the best option moving forward. It addresses the purpose and need of the agencies in a manner that provides environmental advantage and economic feasibility over the other analyzed alternatives. With so much promise for the site's future, I hope the consideration of no action is removed from the table. There is finally an opportunity to restore the site and help secure America's source of antimony, a designated critical mineral.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six years. That is enough. Now, it is time to let Perpetua get to work.
