

Thank you for the opportunity to comment on the plans for the Stibnite Gold Project. Over the last several years, I've had the opportunity to hear a handful of presentations on the project, sit down with members of Perpetua Resources and observe how the company has lived out its mission as it has grown. It is with this knowledge that I encourage you to move the project forward.

Last summer, Perpetua agreed to provide antimony to largescale battery maker Ambri. The agreement establishes a foundation to help facilitate the decarbonization of energy grids in the U.S. as well as around the globe. Ambri's batteries could fundamentally change how our energy system operates by making it possible for power grids to rely on more power from the wind and sun. The Stibnite Gold Project is key to making this happen because it would be America's only mined source of antimony. Without it, we will continue to have to rely on China and Russia for this critical mineral. I want to support America's clean energy transition and supporting the Stibnite Gold Project using Burntlog Road is one of the best ways I can do that.

The SDEIS reduces the size of the project footprint, improves water quality, eliminates the need for long-term water treatment and makes sure water temperature on site does not exceed baseline conditions – all while providing our nation with access to a mineral we desperately need. The permitting process has been thorough and complete. Now, I hope the U.S. Forest Service will realize the benefits this project and permit the Stibnite Gold Project using the 2021 Modified Mine Plan.
