

I have been closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents an opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am grateful for the opportunity to comment on their SDEIS.

Given the history of the region, I was a bit skeptical when I first heard about this project, but it is clear that Perpetua is going out of their way to put environmental safety and restoration front and center. Especially with the improvements the company made in its 2021 Modified Mine Plan. For example, in the SDEIS the company eliminated the Fiddle Rock Development Storage facility, which resulted in a 168-acre reduction in the project footprint. They also made improvements to water quality, so no long-term water treatment will be necessary after mining is complete. After looking at the tools provided by the USFS, I feel strongly that the Modified Mine Plan is the best option moving forward. It addresses the purpose and need of the agencies in a manner that provides environmental advantage and economic feasibility over the other analyzed alternatives. With so much promise for the site's future, I hope the consideration of no action is removed from the table. There is finally an opportunity to restore the site and help secure America's source of antimony, a designated critical mineral.

Please move the Stibnite Gold Project forward, especially now that the public has had multiple opportunities to provide feedback and regulators have been analyzing Perpetua Resources' plans for six years. The review process has improved the project and now it is time to make it a reality.
