

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

I support the 2021 Modified Mine Plan of the SDEIS. Under this plan, Perpetua Resources will help mitigate the damages left by previous mining projects, bring hundreds of well-paying jobs to Valley County and provide the only domestically mined source of antimony in the country. This project would allow our nation to rely less on foreign countries for critical minerals and reduce our carbon footprint by sourcing minerals at home. Environmental regulations are stricter in the United States and when minerals are sourced in this country we do not have to expend as much energy and resources transporting them to their final destination. The 2021 Modified Mine Plan is economically and technically feasible. It also improves upon the company's originally submitted plans. With the new updates, Perpetua has eliminated the need for long-term water treatment, kept water temperatures on site at or below current temperatures, improves water quality and shrinks the size of the project footprint by 13 percent. It is clear it is the best choice moving forward.

I urge you to approve Perpetua Resources' project. The Stibnite Gold Project will provide a huge benefit to our community and the local environment and the company has taken the time to reduce its footprint and improve water quality at site. The permitting process is designed to move the best plans forward and I feel that is what we will do with the 2021 Modified Mine Plan.
