

I am proud to welcome Perpetua Resources into our state and proud to support the Stibnite Gold Project. The project will produce America's only source of antimony, a mineral our national security and clean energy future depends upon, and leave the site in better condition than it is today. I hope you will take the time to consider my comments on why you should move to permit the project.

Perpetua Resources has a clear plan to clean up legacy issues in the historic Stibnite Mining District. The company has recently made improvements to their plans that reduce the project footprint, improve water quality and keep water temperatures at or below current conditions. This will improve fish habitat, water quality and safely store old mine waste. Along with restoring the site, the Stibnite Gold Project will produce the only domestically mined supply of antimony. Currently, China is the top producer of this mineral. If the Stibnite Gold Project moves forward, the United States can become less reliant on other countries. Creating a domestic source of antimony will also be beneficial for America's green future. Sourcing antimony within the U.S. will result in lower carbon emissions as we will not need to transport the mineral from China into the U.S. Mining standards in the U.S. are also more protective of the environment.

Perpetua Resources wants to invest \$1 billion in our state, bring more than 1,000 jobs to rural Idaho and still provide access to Idaho's public lands. This is the type of project our state needs. After reviewing the project for six years, I highly encourage the U.S. Forest Service to move the project forward with the improvements laid out in the SDEIS.
