

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

It is time to move the Stibnite Gold Project. Perpetua Resources has spent the last 12 years working with stakeholders to make sure its project meets the highest environmental standards and brings positive benefits to Idaho. Over the past six years, multiple federal, state and local agencies have analyzed the project as part of the review process. The public has had ample time to review Perpetua's plans and two opportunities to provide comments. The input and permitting process has improved the plan. Perpetua resources has increased recreational access, improved water quality and reduced its project footprint. It is time to move the project forward.

The Stibnite Gold Project has been under federal review for the last six years. That has given regulators and the public plenty of time to review the company's plan. I know this project will transform an area in need of environmental repair and secure a domestic supply of antimony. It is for all of these reasons that I encourage you to move the Stibnite Gold Project forward.
