

Thank you for the opportunity to comment during the Supplemental Draft Environmental Impact Statement period for the Stibnite Gold Project. This project could help stop our import reliance on China and Russia for antimony and improve environmental conditions at an abandoned mine site. It is important to me to see this project move forward.

One of the top reasons why I support Perpetua Resources' plans is because it will secure an American source of antimony. The federal government deemed antimony a critical mineral because of its use in the energy and national defense industries. Today, there is no domestic source of this mineral. Most of it comes from China or Russia, which makes our country vulnerable. America's military depend on antimony to protect our country and stay safe. The mineral is used in munitions, military clothing, night vision goggles, infrared sensors and more. It is irresponsible to continue relying on our adversaries to provide us with antimony. I have reviewed the plan and believe the Burntlog option will allow the company to mine safely, minimize the impacts to the environment and help protect our national security.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.

Mary
