

Thank you for the opportunity to comment during the Supplemental Draft Environmental Impact Statement period for the Stibnite Gold Project. This project could help stop our import reliance on Mainland China and Russia for Antimony and improve environmental conditions at an abandoned mine site. It is important to me to see this project move forward.

The USA Armed Forces depend on Antimony, and today we have NO domestic supply. This means we are putting our faith in Mainland China and Russia to keep our troops safe. This seems incredibly risky given all that is happening in the world. The Stibnite Gold Project, utilizing the Burntlog Route, presents us with an opportunity to secure our National Security future and restore an abandoned mine site.

We CANNOT let this chance pass us by.

Thank you for the thorough review of the Stibnite Gold Project. After analyzing the project for the past 6 years, I urge you to now move forward and permit the mine using the 2021 Modified Mine Plan so Perpetua Resources can put US citizens back to work.
