

Public participation is a huge part of the permitting process and I appreciate the opportunity to share my thoughts on the SDEIS. This project is important to me because it can provide America with a domestically mined source of antimony and restore an abandoned mine site in need of repair.

The Biden administration has set an ambitious goal to have a clean energy grid by 2035. We cannot meet that goal without antimony. Antimony is used to make solar panels, wind turbines and large-scale batteries. Currently, we do not have a domestic source of this critical mineral. The Stibnite Gold Project would provide America with a secure and sustainable source. In fact, the project could satisfy 35% of America's antimony needs and help support our clean energy future. Perpetua Resources has already agreed to provide enough antimony to Ambri to help the battery manufacturer power 1 million homes with solar power. I believe the minerals from the Stibnite Gold Project can be used to help us protect our environment and I trust in the company's plans to minimize environmental impacts during mining and restore the site when they are done.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six year. That is enough. Now, it is time to let Perpetua get to work.

Debbie Lane
