

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

America's armed forces depend on antimony and, today, we have no domestic supply. This means we are putting our faith in China and Russia to keep our troops safe. This seems incredibly risky given all that is happening in the world. The Stibnite Gold Project, utilizing the Burntlog Route, presents us with an opportunity to secure our national security future and restore an abandoned mine site. We cannot let this chance pass us by.

I appreciate your time and thoughtfulness in the review process. The U.S. Forest Service has not cut any corners over the past 6 years analyzing the project and I've appreciated the opportunities to provide feedback. For the reasons I stated in my letter above, please permit the Stibnite Gold Project.
