

I am writing to express my views on Perpetua Resources' Stibnite Gold Project. The opportunity presented by the project is compelling for many reasons and I am committed to seeing come to fruition. This is the best opportunity to clean up legacy tailings and waste, reconnect fish to miles of spawning grounds that they have been blocked from for 80 years and restore a river. Without Perpetua Resources, the site will likely never get the environmental attention it deserves.

The Biden administration has set an ambitious goal to have a clean energy grid by 2035. We cannot meet that goal without antimony. Antimony is used to make solar panels, wind turbines and large-scale batteries. Currently, we do not have a domestic source of this critical mineral. The Stibnite Gold Project would provide America with a secure and sustainable source. In fact, the project could satisfy 35% of America's antimony needs and help support our clean energy future. Perpetua Resources has already agreed to provide enough antimony to Ambri to help the battery manufacturer power 1 million homes with solar power. I believe the minerals from the Stibnite Gold Project can be used to help us protect our environment and I trust in the company's plans to minimize environmental impacts during mining and restore the site when they are done.

Reviewing Perpetua Resources' improved plans it is clear to me the company really believes in taking care of the environment and keeping the community safe. That is why they reduced water temperatures, improved water quality and shrunk the project footprint by 13 percent. I urge you to trust in your own review process and permit the Stibnite Gold Project.
