

Good Day,

I have been very closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents a great and worthwhile opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am most grateful for the opportunity to comment on their behalf. .

Restoring the Stibnite Gold Project site will be an incredible investment. Work clearly needs to be done in the area but it should not be funded through taxpayer dollars. Fortunately, Perpetua Resources wants to make the investment. The company is proposing a mining project and full-scale restoration project. They have plans to reconnect fish with their natural spawning grounds. Perpetua will also improve water quality and temperature. After the comments from the DEIS were analyzed, the company recognized it could do more in those areas. They added wider and taller riparian vegetation plantings around stream channels, as well as including a widened and deepened portion of the East Fork of the South Fork Salmon River Channel in the Yellow Pine pit backfill. The company will also solve sedimentation issues by repairing Blowout Creek.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six years. That should be long enough to make an intelligent decision. Now, it is time to let Perpetua get to work.

Kind regards,

Tim Hansch
