

Public participation is a huge part of the permitting process and I appreciate the opportunity to share my thoughts on the SDEIS. This project is important to me because it can provide America with a domestically mined source of antimony and restore an abandoned mine site in need of repair.

Last summer, Perpetua agreed to provide antimony to largescale battery maker Ambri. The agreement establishes a foundation to help facilitate the decarbonization of energy grids in the U.S. as well as around the globe. Ambri's batteries could fundamentally change how our energy system operates by making it possible for power grids to rely on more power from the wind and sun. The Stibnite Gold Project is key to making this happen because it would be America's only mined source of antimony. Without it, we will continue to have to rely on China and Russia for this critical mineral. I want to support America's clean energy transition and supporting the Stibnite Gold Project using Burntlog Road is one of the best ways I can do that.

The permitting process is working. The plan for the Stibnite Gold Project is improved. Now, it is time to move this project forward to a final record of decision.
