

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of Perpetua Resources' Supplemental Draft Environmental Impact Statement. Public participation is a huge part of the permitting process and I appreciate the opportunity to share my thoughts, especially because the Stibnite Gold Project will leave conditions at the site better than they are today.

Last summer, Perpetua agreed to provide antimony to largescale battery maker Ambri. The agreement establishes a foundation to help facilitate the decarbonization of energy grids in the U.S. as well as around the globe. Ambri's batteries could fundamentally change how our energy system operates by making it possible for power grids to rely on more power from the wind and sun. The Stibnite Gold Project is key to making this happen because it would be America's only mined source of antimony. Without it, we will continue to have to rely on China and Russia for this critical mineral. I want to support America's clean energy transition and supporting the Stibnite Gold Project using Burntlog Road is one of the best ways I can do that.

Reviewing Perpetua Resources' improved plans it is clear to me the company really believes in taking care of the environment and keeping the community safe. That is why they reduced water temperatures, improved water quality and shrunk the project footprint by 13 percent. I urge you to trust in your own review process and permit the Stibnite Gold Project.
