

I am proud to welcome Perpetua Resources into our state and proud to support the Stibnite Gold Project. The project will produce gold,

and the U.S.A's only source of antimony, a mineral our national security and cleaner energy future depends upon it. After a tour of the site 5 years ago the project's ability to fix the environmental mess left behind and leave the site in better condition than it is today got me very excited for our future. I hope you will take the time to consider my comments on why you should move to permit the project.

This project meets the highest environmental standards and brings positive benefits to Idaho. Over the past six years, an incredible number of federal, state and local agencies have analyzed the project as part of the review process. The public has had ample time to review Perpetua's plans through community meetings and open hours for anyone to stop in at the office. This is the second opportunity to submit comments to you. The input and permitting process has improved the plan. Perpetua resources has increased recreational access, improved water quality and reduced its project footprint. They have proven many times over that they are willing to make any improvements.

For the above reasons and many more, please move forward with the 2021 Modified Mine Plan for the Stibnite Gold Project as it is important to all Idahoans. After more than 12 years of scientific analysis by the company and six years of regulatory review that the project, we should not have to wait much longer to recognize the project's benefits.
