

I am writing to express my full support of Perpetua Resources and the Stibnite Gold Project. I have a daughter in the area and have stayed abreast of this project over the last 7 years. The project would finally address a contaminated sites from over 70 years ago! Mining issues that have been plaguing the site for decades and help secure the minerals we need for America's future.

The permitting process is designed to move the best plans forward. After reviewing the SDEIS, it is clear to me the Burnt log Road option is the very best plan for the locals. This will allow the abandoned mine site to be restored, America to secure a source of the critical mineral antimony and fish to be reconnected to their native spawning grounds. The Stibnite Gold Project has been under federal review for the past six years and Perpetua Resources has been studying the site for an additional six years. Twelve years of scientific analysis and input is ample time to evaluate a project. An incredible number of government agencies have been part of this review process The process has been rigorous and done its job.

Let's get this project approved and started.
