

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. Today, fish cannot swim past the Yellow Pine pit and heavy metals are leaching into the ground and surface water. The Stibnite Gold Project can leave the conditions better than they are today.

The permitting process is designed to move the best plans forward. After reviewing the SDEIS, it is clear to me the Burntlog Road option is the very best plan for Idaho. This will allow the abandoned mine site to be restored, America to secure a domestic source of the critical mineral antimony and fish to be reconnected to their native spawning grounds. The Stibnite Gold Project has been under federal review for the past six years and Perpetua Resources has been studying the site for an additional six years. Twelve years of scientific analysis and stakeholder input is ample time to evaluate a project. The process has been rigorous and done its job. Now, we need to move the Stibnite Gold Project forward.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
