

Thank you for the opportunity to comment on the plans for the Stibnite Gold Project. Over the last several years, I've had the opportunity to hear a handful of presentations on the project, sit down with members of Perpetua Resources and observe how the company has lived out its mission as it has grown. It is with this knowledge that I encourage you to move the project forward.

Perpetua Resources has made it clear reclamation efforts will start alongside operations. For example, before mining ever begins, fish will be reconnected to their native spawning groups upstream through a fish passageway. Perpetua Resources also identified more ways to help fish populations. Originally, the company proposed not replacing the pit lake at the Yellow Pine Pit, however, a pit lake is included in the 2021 Modified Mine Plan to make sure currently used habitat is replaced and available for the fish that use it today. The company is also adding more plantings along waterways to reduce water temperatures for fish. Perpetua also has proposed using Burnt Log Road in order to keep vehicles away from precious waterways. I am impressed by the improvements the company made to its plan based on public feedback.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
