

I am writing to express my views on Perpetua Resources' Stibnite Gold Project. The opportunity presented by the project is compelling for many reasons and I am committed to seeing come to fruition. This is the best opportunity to clean up legacy tailings and waste, reconnect fish to miles of spawning grounds that they have been blocked from for 80 years and restore a river. Without Perpetua Resources, the site will likely never get the environmental attention it deserves.

The permitting process is designed to move the best plans forward. After reviewing the SDEIS, it is clear to me the Burntlog Road option is the very best plan for Idaho. This will allow the abandoned mine site to be restored, America to secure a domestic source of the critical mineral antimony and fish to be reconnected to their native spawning grounds. The Stibnite Gold Project has been under federal review for the past six years and Perpetua Resources has been studying the site for an additional six years. Twelve years of scientific analysis and stakeholder input is ample time to evaluate a project. The process has been rigorous and done its job. Now, we need to move the Stibnite Gold Project forward.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
