

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents our state with an incredible opportunity to bring well-paying jobs to rural Idaho, boost our state's economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

I have reviewed the 2021 Modified Mine Plan and I believe the Stibnite Gold Project is an opportunity to repair the environment and bring an economic boost to the community. The plans proposed by the company allows the project to finance environmental reclamation and provide the workforce and resources necessary to complete it. If Perpetua Resources isn't allowed to move forward with its plan, this area in Idaho's backcountry will continue to suffer. Currently, salmon are being blocked from their native spawning grounds and hundreds of tons of sediment are pouring into the watershed each year. It is beyond time to address these issues and Perpetua has the right plan to do it. The company made its plans even better after the release of the DEIS. In the 2021 Modified Mine Plan the company reduced the project footprint by 13 percent (compared to the original design), cut back on mined material by 10 percent and eliminated the need for long-term water treatment. In reviewing the document, I think the company is taking the steps needed to protect the area and mine the area safely using the Burntlog Route.

The SDEIS reduces the size of the project footprint, improves water quality, eliminates the need for long-term water treatment and makes sure water temperature on site does not exceed baseline conditions – all while providing our nation with access to a mineral we desperately need. The permitting process has been thorough and complete. Now, I hope the U.S. Forest Service will realize the benefits this project and permit the Stibnite Gold Project using the 2021 Modified Mine Plan.
