

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the NEPA Comment Period. I have been closely following Perpetua Resources' plans since they first came into our state, in large part because some of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities. The Stibnite Gold Project could help us restore an abandoned mine site.

The Stibnite project is important to me because it will strengthen our national security through the production of antimony. Right now, the U.S. relies on foreign countries for this mineral. These days, I think Americans value a domestic supply chain for such important minerals more than ever. The project at Stibnite could produce over 100 million pounds of antimony and become our only domestically mined source in the entire country. Antimony is used to make electronics and batteries and is also a critical mineral for national defense and the energy industry. With the uncertainties that the Coronavirus brought to our world and current war in Ukraine, I want our country to do everything it can to protect us from the uncertainty of changing markets and trade wars. I also feel confident in the company's 2021 Modified Mine Plan. In the SDEIS, the company has managed to eliminate the need for long-term water treatment, improve water quality and shrink the size of the project footprint by 13 percent.

I appreciate your time and thoughtfulness in the review process. The U.S. Forest Service has not cut any corners over the past 6 years analyzing the project and I've appreciated the opportunities to provide feedback. For the reasons I stated in my letter above, please permit the Stibnite Gold Project.

Kathryn Peterson
