

I am writing to share my thoughts on Perpetua Resources' Stibnite Gold project. There are many reasons why I am excited for Perpetua's project to come to life. It would provide America with our only mined supply of antimony, a mineral critical to our national defense and energy sectors. I hope through my comments you will understand why I want to see this project move forward.

Perpetua Resources has made it clear reclamation efforts will start alongside operations. For example, before mining ever begins, fish will be reconnected to their native spawning groups upstream through a fish passageway. Perpetua Resources also identified more ways to help fish populations. Originally, the company proposed not replacing the pit lake at the Yellow Pine Pit, however, a pit lake is included in the 2021 Modified Mine Plan to make sure currently used habitat is replaced and available for the fish that use it today. The company is also adding more plantings along waterways to reduce water temperatures for fish. Perpetua also has proposed using Burnt Log Road in order to keep vehicles away from precious waterways. I am impressed by the improvements the company made to its plan based on public feedback.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward. The permitting process is designed to advance the best plans possible. I believe the work of regulators over the past six years is proof this is what is happening with the Stibnite Gold Project. The thorough review process has been beneficial but there should be no more delays. The project should move forward in a timely manner.
