

I am writing to express my full support of Perpetua Resources and the Stibnite Gold Project. The project would finally address legacy mining issues that have been plaguing the site for decades and help secure the minerals we need for America's future. The company has shown its commitment to Valley County and the state of Idaho and I encourage you to adopt the proposed activities outlined in the company's 2021 Modified Mine Plan during the permitting process.

I support the 2021 Modified Mine Plan of the SDEIS. Under this plan, Perpetua Resources will help mitigate the damages left by previous mining projects, bring hundreds of well-paying jobs to Valley County and provide the only domestically mined source of antimony in the country. This project would allow our nation to rely less on foreign countries for critical minerals and reduce our carbon footprint by sourcing minerals at home. Environmental regulations are stricter in the United States and when minerals are sourced in this country we do not have to expend as much energy and resources transporting them to their final destination. The 2021 Modified Mine Plan is economically and technically feasible. It also improves upon the company's originally submitted plans. With the new updates, Perpetua has eliminated the need for long-term water treatment, kept water temperatures on site at or below current temperatures, improves water quality and shrinks the size of the project footprint by 13 percent. It is clear it is the best choice moving forward.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six years. That is enough. Now, it is time to let Perpetua get to work.

Doug Lewis
