

I am writing to express my full support of Perpetua Resources and the Stibnite Gold Project. Perpetua has shown they are committed to Idaho and want to take care of the environment. The company designed its project to clean up legacy waste, reconnect salmon to their native spawning grounds and fix one of the watershed's largest source of sedimentation. The Stibnite Gold Project would water quality, wetlands and the river better than they are today. I hope you move forward and permit this project as quickly as possible.

The Stibnite Gold Project presents a plan to repair the environment and boost Idaho's economy, especially when using the 2021 Modified Mine Plan. Historic mining operations, development of former town site and natural processes have resulted in significant degradation of many elements of the environment. Loss of fish passage, potential water degradation from previous mining activity and excessive erosion are all of great concern to Idahoans. Right now, fish haven't swam past an abandoned mine pit for more than 80 years. Perpetua will reconnect fish passage before mining ever begins. The company will also improve water quality and temperature to further help fish. More improvements were made to these areas after the DEIS was released. Now, Perpetua Resources has identified ways to keep water temperature at or below baseline conditions. The Stibnite Gold Project would finance reclamation efforts to address these problems, boost Idaho's economy and help secure a critical mineral America needs. It is a win-win for everyone.

After reading my letter, I hope you can see why you should permit the Stibnite Gold Project. This project is a good thing for Idaho, helps decrease America's dependence on foreign countries for a critical mineral and cleans up the environment. The company also continued to refine its plan in response to the permitting process, so it has the smallest footprint possible and results in improved water quality conditions on site.
