

Thank you for the opportunity to comment during the Supplemental Draft Environmental Impact Statement period for the Stibnite Gold Project. This project could help stop our import reliance on China and Russia for antimony and improve environmental conditions at an abandoned mine site. It is important to me to see this project move forward.

America needs antimony and gold. We need to strengthen our supply chains and bring mining home. I know people are concerned about mining's impacts on the environment but regulators identified Perpetua Resources refined plan as it preferred alternative because they determined the company could mine while minimizing impacts on the environment and communities. One of the ways the company does that is by using Burntlog Road. This reduces the number of stream crossings for mine traffic compared to the Johnson Creek Route, reduces the chances of accidents with recreationalists and minimizes the impacts of potential spills. By keeping traffic away from river crossings, it also lowers sedimentation impacts from mining.

This project is a huge opportunity for Idaho. After 6 years of intense review, I encourage the U.S. Forest Service to permit the 2021 Modified Mine Plan so this brownfield site can finally be restored.
