

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents America with an incredible opportunity to bring well-paying jobs to rural Idaho, boost the economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

Regulators named Perpetua Resources' improved plan as its preferred alternative because the company proved it could mine safely while minimizing its impacts to the environment and community. Perpetua Resources will be transporting hazardous materials to and from the site, which is why I am grateful the USFS recognizes Burntlog Road is a safer option because it minimizes river crosses and rarely parallels waterways. As long as there is activity at the site, there will always be the possibility a spill could occur. However, the SDEIS concluded the duration of any single incident involving hazardous materials would only last hours or days and would likely be readily cleaned up and contained without any release to the environment. The SDEIS shows me Perpetua really can leave the site better than they found it.

This project is a huge opportunity for Idaho. After 6 years of intense review, I encourage the U.S. Forest Service to permit the 2021 Modified Mine Plan so this brownfield site can finally be restored.
