

America desperately needs antimony. This mineral is used in munitions, large-capacity storage batteries, fire retardants and more. Currently, we are entirely dependent on foreign countries to provide this mineral, which is why I am writing in support of the Stibnite Gold Project. This project can stop our import reliance on antimony.

Perpetua Resources has developed a plan to provide our nation with a domestic supply of antimony and protect the environment in the process. Perpetua is mindful of its impact and has designed its project to meet or exceed environmental thresholds. For example, modeling in the SDEIS showed the Operations Area Boundary would not exceed the National Ambient Air Quality Standards and mercury, nitrogen and sulfur would fall below significant impact levels. I believe Perpetua Resources can strike the balance of mining the materials we need safely, while also protecting and restoring the environment.

Reviewing Perpetua Resources' improved plans it is clear to me the company really believes in taking care of the environment and keeping the community safe. That is why they reduced water temperatures, improved water quality and shrunk the project footprint by 13 percent. I urge you to trust in your own review process and permit the Stibnite Gold Project.
