

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of Perpetua Resources' Supplemental Draft Environmental Impact Statement. Public participation is a huge part of the permitting process and I appreciate the opportunity to share my thoughts, especially because the Stibnite Gold Project will leave conditions at the site better than they are today.

I am supportive of Perpetua Resources' refined plan in large part because regulators named it as their preferred alternative. The USFS indicated it was the best option for mining the site because it eliminated the need for perpetual water treatment, had a better access route and did a better job managing stream temperatures. Regulators would not have identified Perpetua's plan as their favorite unless they were confident the company could minimize impacts to the environment and community while mining for gold and the critical mineral antimony.

The Stibnite Gold Project is important to Idaho, our national security and clean energy future. Regulators have been reviewing the project for the past 6 years. Why has it taken this long to approve this major environmental clean-up project and at the same time provide America with modern friendly environmental mining? I encourage you to permit the project as quickly as possible.
