

I am writing to express my full support of Perpetua Resources and the Stibnite Gold Project. Perpetua has shown they are committed to Idaho and want to take care of the environment. The company designed its project to clean up legacy waste, reconnect salmon to their native spawning grounds and fix one of the watershed's largest source of sedimentation. The Stibnite Gold Project would water quality, wetlands and the river better than they are today. I hope you move forward and permit this project as quickly as possible.

It is clear that Perpetua is going out of their way to put environmental safety and restoration front and center. That is why the USFS identified the company's 2021 Modified Mine Plan as its preferred alternative. The refined plan eliminates the need for long-term water treatment, incorporates measures to manage stream temperatures and reduces impacts associated with access and transportation on Johnson Creek. The fact that regulators named the company's plan as its preferred alternative gives me great confidence in the company's plan. Plus, regulators have concluded the Modified Mine Plan will let Perpetua mine while giving consideration to environmental, economic and technical factors.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
