

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the NEPA Comment Period. I have been closely following Perpetua Resources' plans since they first came into our state, in large part because some of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities. The Stibnite Gold Project could help us restore an abandoned mine site.

In order for Perpetua Resources' Stibnite Gold Project to move forward, the company must mitigate for any impacts the project will have on the environment. In the 2021 Modern Mining Plan of the SDEIS, the company has outlined how it can leave water quality on the site better than it is today and provide fish with access to more habitat. I was pleased to learn Perpetua Resources has also taken steps to protect air quality. According to analysis in the SDEIS hazardous air pollutants were found to be well below major thresholds and the Operations Area Boundary would not exceed the National Ambient Air Quality Standards. To me, these facts from the SDEIS demonstrate the proper checks and balances are in place to protect the environment.

The Stibnite Gold Project has been under federal review for the last six years. That has given regulators and the public plenty of time to review the company's plan. I know this project will transform an area in need of environmental repair and secure a domestic supply of antimony. It is for all of these reasons that I encourage you to move the Stibnite Gold Project forward.
